SUMMARY

Full-Stack Developer with hands-on experience building and deploying production-grade MERN and Next.js applications. Built EaseWork — a SaaS-style project management platform with RBAC, Redis caching, OTP-based authentication, and Razorpay payment integration — independently from scratch. Strong foundation in TypeScript, REST API design, optimistic UI patterns, and secure authentication. Seeking a frontend or full-stack developer role where I can contribute from day one.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js (App Router), Context API, Tailwind CSS, Responsive Design

Backend: Node.js, Express.js, Next.js API Routes, REST APIs, MongoDB, Redis

Tools & Services: Git, GitHub, Cloudinary, Nodemailer, Razorpay, VS Code

Deployment: Vercel, Render, Redis Cloud, MongoDB Atlas

EXPERIENCE

Web Developer Intern — Squareit Solutions, Lucknow

Feb 2026 – May 2026

- Built and deployed responsive landing pages using React.js and Tailwind CSS; integrated third-party APIs and handled frontend-backend communication.
- Improved UI responsiveness and cross-device compatibility across multiple client projects.
- Configured deployments on Vercel including custom domain setup and environment variable management.

PROJECTS

EaseWork — Team Collaboration & Project Management Platform [Live](#) | [GitHub](#) *Next.js, TypeScript, MongoDB, Redis, Tailwind CSS*

- Built a full-stack SaaS-style project management platform supporting manager and employee workflows with Role-Based Access Control (RBAC) — managers can approve projects and employees accounts, project admins can assign tasks, onboard employees, and monitor progress; employees can view assigned work and collaborate.
- Implemented Redis caching for frequently accessed project, task, and company data, reducing redundant database queries and improving response times for cached routes.
- Designed optimistic UI updates — on write operations, the UI updates immediately with a local copy of the new data (e.g. new task, new message) without waiting for a re-fetch, keeping the experience fast and seamless.
- Built secure OTP-based password reset using Nodemailer and Redis TTL with a 5-attempt rate limit; after 5 failed attempts, the user is blocked for 5 minutes before they can retry.
- Integrated Cloudinary for media uploads, Razorpay for payment processing, and Nodemailer for automated email notifications; deployed on Vercel with MongoDB Atlas and Redis Cloud.
- Implemented per-project group chat with unread message tracking, ensuring only project members can send messages regardless of how the chat URL is accessed.

Full-Stack MERN Social Platform [Live](#) | [GitHub](#)

React, Node.js, Express, MongoDB, Tailwind CSS

- First MERN project — built end-to-end from scratch: user auth with JWT, posts, likes, comments, notifications, and a messaging system with unread tracking and time-limited edit/delete.
- Implemented OTP-based password reset via Nodemailer and designed a normalized DB schema with separate collections for users, posts, comments, likes, and notifications.
- Deployed frontend on Vercel and backend on Render; handled edge cases including unauthorized action attempts and input validation.

Memories App — Personal Memory Manager [Live](#) *React, Node.js, Express, MongoDB, Tailwind CSS*

- Built a full-stack memory management app with JWT + bcrypt authentication, multi-image upload via Cloudinary, CRUD operations, dark/light mode, and OTP-based password reset.

EDUCATION

B.Tech in Information Technology — Lucknow Institute of Technology 2023 – 2026

Diploma in Mechanical Engineering — Government Polytechnic Lucknow 2019 – 2022
