SUMMARY

Full-Stack Developer with hands-on experience building and deploying production-grade web applications across both NoSQL (MongoDB) and SQL (MySQL) stacks. Built EaseWork — a SaaS-style project management platform with RBAC, real-time Socket.IO chat, Redis caching, OTP-based authentication, and Razorpay payment integration — independently from scratch. Strong foundation in TypeScript, REST API design, Prisma ORM, optimistic UI patterns, and secure authentication. Seeking a frontend or full-stack developer role where I can contribute from day one.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js (App Router), Context API, Tailwind CSS, Responsive Design

Backend: Node.js, Express.js, Next.js API Routes, REST APIs, MongoDB, MySQL, Redis, Socket.IO, Prisma ORM

Tools & Services: Git, GitHub, Cloudinary, Nodemailer, Brevo, Razorpay, VS Code

Deployment: Vercel, Render, Redis Cloud, MongoDB Atlas, Railway (MySQL)

EXPERIENCE

Web Developer Intern — Squareit Solutions, Lucknow

Feb 2026 – May 2026

- Built and deployed responsive landing pages using React.js and Tailwind CSS; integrated third-party APIs and handled frontend-backend communication.
- Improved UI responsiveness and cross-device compatibility across multiple client projects.
- Configured deployments on Vercel including custom domain setup and environment variable management.

PROJECTS

EaseWork — Team Collaboration & Project Management Platform [Live](#) | [GitHub](#) *Next.js, TypeScript, MongoDB, Redis, Socket.IO, Tailwind CSS*

- Built a full-stack SaaS-style project management platform with Role-Based Access Control (RBAC) — managers approve projects and employee accounts; project admins assign tasks, onboard members, and monitor progress; employees view assigned work and collaborate.
- Implemented real-time per-project group chat using Socket.IO — instant message delivery, live unread message count updates, and instant notifications; access-controlled so only project members can send messages regardless of how the chat URL is accessed.
- Integrated Redis caching for frequently accessed project, task, and company data, reducing redundant database queries and improving response times for cached routes.
- Designed optimistic UI updates — on write operations, the UI updates immediately with a local copy of new data (e.g. new task, new message) without waiting for a re-fetch, keeping the experience fast and seamless.
- Built secure OTP-based password reset using Nodemailer and Redis TTL with a 5-attempt rate limit; after 5 failed attempts the user is blocked for 5 minutes before retrying.
- Integrated Cloudinary for media uploads, Razorpay for payment processing, and Nodemailer for automated email notifications; deployed on Vercel with MongoDB Atlas and Redis Cloud.

TaskFlow — Full-Stack Task Management Platform [Live](#) *React, Next.js, TypeScript, MySQL, Prisma ORM, Redis, Express*

- Built a full-stack task management platform with secure JWT authentication using HTTP-only cookies and role-based user access.
- Integrated Prisma ORM with MySQL (Railway) for type-safe database operations and schema management — demonstrating proficiency across both SQL and NoSQL stacks.
- Implemented Redis caching and OTP storage for account verification, password reset, and session management.
- Developed complete CRUD functionality for tasks with pagination, client-side search, filtering, sorting, and deadline tracking; deployed frontend on Vercel and backend on Render.

Full-Stack MERN Social Platform [Live](#) | [GitHub](#) *React, Node.js, Express, MongoDB, Tailwind CSS*

- First MERN project — built end-to-end from scratch: JWT auth, posts, likes, comments, notifications, and a messaging system with unread tracking and time-limited edit/delete.
- Implemented OTP-based password reset via Nodemailer and a normalized DB schema with separate collections for users, posts, comments, likes, and notifications.
- Deployed frontend on Vercel and backend on Render; handled edge cases including unauthorized action attempts and input validation.

Memories App — Personal Memory Manager [Live](#) *React, Node.js, Express, MongoDB, Tailwind CSS*

- Built a full-stack memory management app with JWT + bcrypt auth, multi-image upload via Cloudinary, CRUD operations, dark/light mode, and OTP-based password reset.

EDUCATION

B.Tech in Information Technology — Lucknow Institute of Technology	2023 – 2026
Diploma in Mechanical Engineering — Government Polytechnic Lucknow	2019 – 2022
